Once the link is open, to view documents click the "Documents" button to view the Public Notice Announcement and the appropriate plans for the project. To leave a comment, please click on the "Add Comment" button. When inputting your comment please do not add any personal identification information (PII) concerning yourself or any other individual, into the comment box, including but not limited to email or telephone number.

The above link will expire 20 days from today's date.

District Office: Grand Rapids District Office
WRD Contact: Cory Brown, BrownC61@michigan.gov
County: Kent
Public Notice Start Date: September 28, 2022
Public Notice End Date: October 18, 2022
Site Name: 41-55 & 85 Campau Ave NW-Grand Rapids
Application Submission Number: HP8-8RNS-2WDK2
Applicant: Karie Enriquez
Project Location:
TRS: 07N12W25

Regulatory Authorities Under NREPA: Part 31, Water Resources Protection and Part 301, Inland Lakes and Streams of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended (NREPA).

The applicant proposes: To remove 360 linear feet of failed sidewalk which will require 12 cubic yards of cut below the Ordinary High Water Mark (OHWM) along the Grand River and install 357 linear feet of new concrete/brick pathway, of which 88 cubic yards of fill is proposed below the OHWM (with 74 cubic yards of cut) and 272 cubic yards is proposed below the 100-year floodplain. Construct a landing area/lower pathway which will require 24 cubic yards of cut and 36 cubic yards of fill below OHWM/100-year floodplain. Construct dual-purpose steps to the water's edge, which will require 282 cubic yards of cut and 302 cubic yards of fill below OHWM/100-year floodplain. Install 334 linear feet of natural field stone armor to protect the eroded channel banks, of which, 231 cubic yards of fill is below OHWM, and 245 cubic yards is below the 100-year floodplain. Excavate 136 cubic yards of material to key in material. Vegetative plugs are proposed to be planted amongst the field stone

which will require soil infill, of which 82 cubic yards is below the OHWM and 90 cubic yards is below the 100-year floodplain. Deep-rooted vegetative plugs are also proposed to help to secure stone to prevent dislodgement. Place 19 cubic yards of riverine gravel and cobble fill below the OHWM/100-year floodplain at the water's edge near the blue bridge. This will also require 16 cubic yards of cut below the OHWM to key in materials. Total proposed cubic yards of cut below the OHWM is 617 and total proposed fill below the OHWM is 758. Total proposed cubic yards of excavation/storage in the floodway of the Grand River is 800 and total proposed fill below the 100-year floodplain/in the floodway is 965. Purpose of the project is to restore the area to allow safe public use of the space, including paved multi-use trail, and providing safe access to river's edge.

Mercedes (Mercy) Alvarado
